WHY IS IT IMPORTANT TO HAVE PROFESSIONALS TAKING CARE OF YOUR IRRIGATION SYSTEM?

WHAT ARE THE BENEFITS OF HAVING A SMART IRRIGATION CONTROLLER?

WHAT CAN YOU EXPECT DURING SPRING?

WHAT IS WATER MANAGEMENT AT MASTERSCAPES?

Water Management provides the necessary upkeep and maintenance required for your irrigation system.

MasterScapes' Water Management service is the go-to solution for effective and efficient water management in any outdoor space.

As professionals we can best assess the many factors that should be considered when programming a system. Some of the factors are: number of heads per zone, nozzle type, water pressure, average temperature, and various microclimates.

Once your controller is installed and programmed, we will annually assess each zone's nozzle coverage and make adjustments as needed. We want to make sure we are watering the landscape and not the sidewalk or street!

Using smart technology, we now can monitor your system and make seasonal and extreme weather adjustments remotely. In the event the system needs attention, we will come out and replace heads, nozzles, and drip at no cost to you if you are a full-service client with our Water Management plan.

An additional beneficial technology that MasterScapes offers is the flowmeter. This extra feature is installed to work with your smart controller and will notify us when breaks or significant changes in water pressure are detected. When this happens, we can shut off the system remotely and schedule a time to come diagnose what may be wrong with the system.

When something does break or need repair, we will offer you a quote that details what parts of the system needs to be repaired. Again, if you are a full-service client on our Water Management plan all heads, nozzles, and drip repairs will be at no cost to you.

WHY IS IT IMPORTANT TO HAVE PROFESSIONALS TAKING CARE OF YOUR IRRIGATION SYSTEM?

Selecting and installing a smart irrigation system is an important investment for any residential or commercial client. A smart irrigation system ensures that landscapes are nurtured and sustained.

Our irrigation technicians have demonstrated knowledge and expertise in assessing clients' specific needs. Licensed irrigators design and install systems that optimize water usage in the landscape.

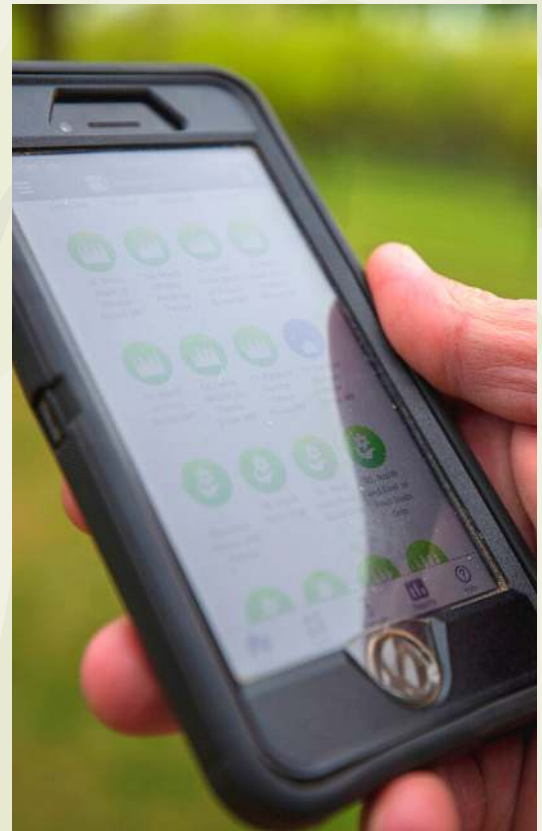

WHAT ARE THE BENEFITS OF HAVING A SMART IRRIGATION CONTROLLER?

A **smart irrigation controller** waters your landscape for you with the added feature of automatically adjustments based on the weather, plant type, and other factors. Smart irrigation is becoming increasingly popular, is more water-efficient, and makes life easier.

Here are some facts and benefits about smart irrigation controllers:

- Did you know that around 70% of water usage occurs outside for irrigation? According to the Environmental Protection Agency, 50% of irrigation water is wasted.
- Smart irrigation controllers can be adjusted to water a landscape to a precise amount. This reduces water waste and allows you to manage and optimize water usage according to your landscape needs.
- One of the most significant values smart controllers offer is the ability to work on them remotely. If an issue is detected, we will receive an alert and can respond quickly. Systems can even be turned off remotely when a concern arises.

There's no reason why smart technology shouldn't move outdoors to help us with our landscapes!

WHAT CAN YOU EXPECT DURING SPRING?

Winter was harsh, so it may take a bit more this Spring to nurse your landscape back to full health.

But, don't worry, we will take care of all the landscape work!

Our Spring services can include:

- Cleaning up leaves and debris
- Mowing the grass weekly
- Weed Control treatments
- Redefining the borders of the lawn
- Fire ant treatment
- Shrub trimming
- Aeration
- Fertilization
- Irrigation diagnostic visits
- Planting Seasonal Color like: pentas, periwinkles, begonias, and snapdragons.

**Take pride in your property
looking great this Spring with
MasterScapes!**
